

STEP-BY-STEP PROCESS:

Handling "Patient Not Found" or Returned Correspondence

Verify in RT

When you are informed that correspondence was returned because the patient (PT) was not found or is not in the system, the first step is to check in RT(HITECH) and confirm that all request information is accurate.

If you find any discrepancies or incorrect information, resend the request with the corrected details.

Correct and Resend if Needed

If the Patient Is Not Yet in RT

If the patient is not in RT yet (because they have not attended their appointment) If the patient is not found in RT or the portal, we proceed to search in the email by filtering using the patient's name, proceed to call the patient to verify their information.

CALL NOW

If there is no response, check the appointment date in Column C of the log.

If the Patient Does Not Answer

Follow Up Based on Appointment Date

Verify the patient's information in RT on the day of the appointment or the day after.

If all the information is correct and verified, mark the patient in red in the log.

Mark in the Log
